Professional profile

I build software that turns complex ideas into practical solutions.

My AI work spans LangGraph agents, retrieval-augmented generation (RAG), and integrations with model providers. I also deploy models locally with llama.cpp, connect tools through MCP, and integrate ComfyUI workflows for image and video generation.

On the backend, I develop asynchronous APIs with FastAPI and design database access and background processing. My experience includes Celery and Redis task processing, distributed inference with Ray, and containerized deployments supported by automated tests and CI/CD.

I focus on performance, reliability, and code that teams can maintain. Claude supports my coding workflow, while Codex helps with day-to-day engineering tasks.

Technical skills

AI & orchestration: LangGraph, LLM agents, RAG, MCP, Ray, ComfyUI, OpenAI, Gemini, Fal.ai, llama.cpp, Local model deployment

Backend & data: Python, Asynchronous programming, FastAPI, Flask, SQLAlchemy, PostgreSQL / PostGIS, Redis, Celery, GraphQL, gRPC, WebSocket

Infrastructure & delivery: AWS EC2 / ECS / EKS, AWS S3 / ElastiCache, Kubernetes, Docker, GitLab CI, Jenkins, pytest, Prometheus, VictoriaLogs, FFmpeg

Development tools: Claude for coding, Codex for daily engineering tasks

Additional backend and data: REST, SQL, MySQL, MongoDB, Docker Compose, S3-compatible storage

Architecture and collaboration: Microservices, Clean Architecture, DDD, KISS, DRY, API and data modeling, SQL optimization, code reviews, Scrum, Kanban, Flutter/Dart

Additional integrations: ByteDance, Slack, unittest

Other technologies: Django, Linux, Nginx, Apache Kafka, RabbitMQ, ClickHouse, PyTorch

Professional experience

Prequel Inc. | Python Developer

10.2025 - 04.2026

- Built backend services for AI photo and video generation with FastAPI, PostgreSQL, Redis and Kubernetes.
- Orchestrated LangGraph agents and distributed Ray inference pipelines, reducing AI inference latency by 30%. This work supported parallel image and video generation and processing.
- Unified multiple AI providers with failover; built an agent for log and alert analysis using VictoriaLogs and Prometheus.
- Integrated custom ComfyUI workflows and optimized video rendering with FFmpeg. Supported Kubernetes infrastructure and CI/CD improvements while collaborating with R&D engineers and art teams.

Professional experience

Nashy | Full Stack Engineer

04.2025 - 07.2025

- Designed application architecture, FastAPI APIs, data models and caching strategies.
- Implemented PostGIS search, Celery tasks and S3-compatible media storage. Query caching doubled average venue listing loading speed. Compared venue listing load times with cold and warm caches.
- Reduced response time by 40% through media and background-processing optimization. Compared the same API requests before and after optimization under equivalent load, tracking median and p95 latency separately.
- Reduced server load through media and background-processing optimization. Compared CPU usage, memory consumption and background task duration for the same number of media files; also contributed Flutter/Dart features.
- Optimized SQL using execution plans, indexes and materialized views; configured GitLab CI and containerized services with Docker and Docker Compose. Contributed mentoring and code reviews in a cross-functional Scrum team.

Forte Group | Python Developer

11.2022 - 01.2025

- Developed FastAPI and Flask applications, REST and GraphQL APIs, and gRPC / WebSocket integrations.
- Reduced key endpoint response times from about 400 ms to 220-300 ms through caching and SQL optimization. The work focused on database access in existing backend endpoints.
- Increased automated test coverage from 40% to 85%; maintained microservices with Clean Architecture and DDD.
- Worked with PostgreSQL, MySQL, MongoDB and Redis; implemented Celery background processing and maintained Docker deployments with GitLab CI and Jenkins. Refactored legacy code in Scrum and Kanban teams.

Tapston | Python Developer

09.2021 - 03.2022

- Developed Python modules under mentor supervision and worked with PostgreSQL and MySQL.
- Wrote unit and integration tests with pytest and unittest; reduced release defects by 30% through testing and code reviews. This combined unit and integration tests with defect fixes and code review.
- Delivered and integrated features without production downtime; analyzed defects and refactored code under mentor supervision.

Education

Minsk College of Business

Information Technology Software | 08.2020 - 07.2024

Subjects: Arithmetic and logical foundations of computer engineering; System software; Databases and database management systems; Object-oriented programming; Computer information security; Big data and machine learning

Technologies studied: Assembly, C/C++, C#, Python, HTML/CSS, JavaScript/TypeScript, NumPy, pandas, TensorFlow, scikit-learn, WinUI, Linux, TCP/IP, Bash

Languages

English - B2 | Russian - Native | Belarusian - C2 | Polish - A2
